

Jobs to be done - Portfolio planning

Mapping the workflows and needs across capital project stakeholders

Capital Planner

5-10 year roadmap & portfolio management

When I... Early Stage Planning	When I... Managing Approvals	When I... Scenario Planning
I want to... Create 'Concept' or 'Initiative' projects with lightweight data without triggering full project workflows	I want to... Track the specific stage of a project and gate it from moving forward until requirements are met	I want to... Create multiple versions of a plan and compare them side-by-side
So that I can... Capture future demand (the 'pipeline') without polluting the active project list	So that I can... Prevent unauthorized spend and ensure we don't release funds for projects that haven't cleared hurdles	So that I can... Quickly advise leadership on what projects must be cut if funding drops

Project Manager

Executing specific projects & managing detailed budgets

When I... Negotiating Bids	When I... Budget Validation	When I... Forecasting	When I... Project Handoff
I want to... Access historical cost data to benchmark against current bids	I want to... See if a specific budget code has remaining funds before I approve a Purchase Order	I want to... Update my 'Forecast to Complete' in a single view across multiple projects	I want to... Ensure all project data is retained and accessible after the GC leaves
So that I can... Know if a General Contractor is overcharging me and negotiate a fair price based on data	So that I can... Prevent overspending and ensure I am not authorizing work that isn't funded	So that I can... Save time on administrative data entry and keep the financial forecast accurate	So that I can... Maintain the facility effectively and reference decisions made during construction

Director of Public Works

Executing specific projects & managing detailed budgets

When I... Intake & Triage	When I... Program Management	When I... Asset Lifecycle
I want to... Collect requests via a simple form and score them based on criteria like safety or ROI	I want to... Group smaller projects into broader programs like 'Deferred Maintenance'	I want to... Track 'break/fix' items separately from major capital projects but view them in the same system
So that I can... Objectively decide which projects to fund when demand exceeds the available budget	So that I can... Manage a bucket of money flexibly-if one roof comes in under budget, I can reallocate funds	So that I can... Ensure that small but critical repairs don't get lost just because they don't meet the capital threshold

Director of Finance or Project Controls

Compliance, funding sources & audit trails

When I... Funding Management	When I... Board Authorization	When I... Audit & Compliance
I want to... Track specifically which 'color of money' is funding a specific project invoice	I want to... Monitor 'Contract Authority' vs. 'Board Authority'	I want to... Maintain a strict audit trail of who changed a budget number, when, and why
So that I can... Ensure compliance with funding requirements and report accurately to the board/public	So that I can... Flag immediately if we are approaching our authorized limit so I can go back to the board	So that I can... Satisfy internal and external audits and prevent unauthorized scope creep

Capital Project Executive

High-level strategy & portfolio health

When I... Portfolio Review	When I... Strategic Alignment	When I... Performance Review
I want to... Visualize the total demand against my available capital 'tank'	I want to... See a high-level Gantt chart of all major initiatives over a 3-5 year horizon	I want to... View a dashboard of 'Planned vs. Actual' spend across the entire portfolio
So that I can... Drag and drop projects 'above or below the line' to make rapid strategic decisions on what gets funded	So that I can... Ensure we aren't overloading our project teams and that our investments align with long-term goals	So that I can... Identify systemic issues and adjust strategy accordingly
